Karlskrona, Sweden

Core Skills

Accessibility & Standards

WCAG 2.2, EN 301 549, DIGG, EAA. Manual Screen Reader testing (NVDA/VoiceOver), ARIA patterns, and accessibility auditing.

Design & Research

Accessible Design Systems, Semantic Tokens, Information Architecture, User Research, and Prototyping in Figma.

Systems & Delivery

Solutions Analysis, Requirements Gathering, Process Mapping, and Technical Handoff.

AI & Productivity

AI-augmented workflows (Cursor, Figma MCP), Design-to-code automation, and documentation scaling.

Education

UX/UI Designer

Hyper Island, Sweden
Aug 2023 - Jun 2025

B.Tech Information Systems

União Educacional de Brasília
2002 – 2006

Languages

Portuguese Native

English C1 Advanced

Swedish Conversational (actively improving)

Professional Summary

My background isn't the typical path for a designer. I started as a Solutions Analyst and Tax Compliance Specialist, which taught me how to navigate strict regulations like the European Accessibility Act (EAA) and WCAG 2.2 long before I moved into UX.
Today, I bring that "systems mindset" to product design, bridging the gap between complex legal requirements and user-centric experiences. I don't just add accessibility at the end; I bake it into the design system from the start using semantic tokens and AI-augmented workflows to keep the handoff to engineering seamless.

Work Experience

Accessibility Product Designer

AxessLab • Sweden • Jan – Jul 2025

- Built a WCAG 2.2 compliant design system from scratch, aligning our Figma components with DIGG and EN 301 549 standards using semantic tokens and ARIA patterns.
- Trained the design team on accessibility, moving beyond just "checking boxes" to showing them how to build inclusive flows directly into their daily Figma work.
- Developed a custom annotation kit in Figma so designers could clearly hand off heading hierarchies, focus orders, and ARIA labels to the developers.
- Ran manual accessibility audits using screen readers, catching the critical logic and navigation issues that automated testing tools always miss.
- Used AI to speed up the audit documentation, but manually verified every single finding to ensure we actually met compliance.

Product Designer & Co-Founder

Arcanimal • Remote & Brazil • May 2024 - Present

- Built a dedicated animal welfare platform from the ground up, designing everything from the shelter management tools and adoption flows to the specific reporting required by the public sector.
- Moved the team to an AI-assisted design-to-code workflow using Flowbite, Figma MCP, and Cursor. This cut out most of the manual handoff work and kept our UI consistent while we scaled.

Product Designer (Contract)

Intelligyn • Sweden • Sep – Oct 2024

- Rebuilt the entire site in Squarespace after a UX audit showed most users were dropping off on the landing page due to dense, text-heavy layouts and a confusing structure.
- Fixed the visual hierarchy and messaging, breaking down walls of text into clear, readable sections so visitors could actually understand the product.
- Cleaned up the site's SEO and performance, manually restructuring the heading hierarchy and content to match the actual terms users were searching for.

Product Designer (Contract)

Position Green · Sweden • Feb – Mar 2024

- Investigated why the demo button was at 0.3% conversion, using GA4 and heatmaps to see exactly where people were dropping off.
- Used AI to help sort through a mountain of feedback, pulling out the real issues so the team knew what to prioritise.
- Delivered insights to the client on why the current flow was failing, giving them the actual evidence they needed to start making fixes.

UX Researcher · Product Designer (Contract)

Mentatt • Sweden • Oct – Dec 2023

- Ran the user research that proved there was zero willingness to pay for the initial mental health app concept.
- Presented these findings to the founders and investors, which stopped them from building the wrong product and forced a strategic pivot.

Co-Founder · Product Designer & Business Analyst

Join Solution • São Paulo, Brazil • 2011 – 2012

- Co-founded a startup to automate the nightmare of inbound NF-e (Electronic Invoice) workflows for enterprise clients.
- Replaced manual data entry by building an XML parsing engine, taking invoice processing from hours down to minutes for SAP and Oracle users.
- Architected the entire flow for incoming invoices, which cut the workload by over 80% and finally eliminated the manual typing errors that were slowing down the business.

Project Manager · Tax Compliance Specialist

Thomson Reuters • Brazil • 2010 - 2014

- Led the migration from paper to electronic invoicing for 20+ enterprise clients, managing the technical transition and user adoption.
- Implemented integrations between client ERPs (SAP/Oracle) and government validation platforms (SEFAZ), ensuring real-time data integrity.
- Attended government regulatory meetings to break down complex tax laws into actual tasks for our developers and plain-language guidance for our clients.

Solutions Analyst

Thomson Reuters • Brazil • 2008 – 2010

- Implemented NF-e digital invoicing for clients in Healthcare, Energy, and Automotive, adapting the system to the unique requirements of each industry.
- Mapped out exactly how data needed to move between ERPs and government systems, making sure every business process was captured before the integration started.
- Owned the entire project from start to finish, including the technical testing, user training, and staying on-site through the final go-live to handle any issues.
